

MEDITECH Training Services

Our MEDITECH training consultants combine years of experience in end-user training with deep knowledge of effective tactics to enable a successful training program. Our team's broad knowledge enables them to view your training program holistically and provide more efficient coverage of a complete end-to-end training program covering pre-live, go-live, and post-live training and adoption strategies.

Strategic Oversight

With experience across many installing clients, we help you design and execute role-based training for smooth go-lives and set you up for new hire and ongoing training efforts long after go-live.

Curriculum and Program Design

Based on the needs of your organization we create and manage a blended training program using instructor-led classroom training, virtual-led online training, and e-learning. We help you build your long-term end-user education plan with an eye on user adoption and satisfaction, with specific offerings such as physician experience improvement, post-live refresher training session development and overall evaluation of your training program.

Clinician Led Training Solutions

Our clinical applications training is developed by clinicians focusing on the end-user experience and workflow. We don't just on the "how-to" part of training - but we include critical components of change management and communication to ensure training is an enabler to lead to the successful rollout of your EHR.

The implementation of a new EHR is one of the biggest investments an organization can make. One of the biggest predictors of high adoption and a successful EHR rollout is an effective, well-designed training program.
